1. Introduction

Fresh Khana is an online food ordering platform designed to let customers browse food products, place orders, and track deliveries, while giving administrators full control over products, users, orders, and deliveries. This document walks through every module of the current build in the order they would be demonstrated to a client or evaluation panel.

The sections below describe each module's purpose, what to say while demonstrating it, its key features, and the business value it delivers.

2. Customer-Facing Modules

2.1. Home Module

Purpose: Landing page of the application.

Welcome to Fresh Khana. This is the home page where users can explore our online food ordering platform. The navigation menu provides quick access to Home, Contacts, Sign In, Sign Up, and Shopping Cart.

Features

- Company branding
- Navigation menu
- About Fresh Khana
- Responsive design
- Customer-friendly interface

Business Benefit: First impression, easy navigation, and brand awareness.

2.2. About Us Module

Purpose: Introduce the company.

This page explains who we are, our mission, and what kind of food services we provide.

Covers

- Company introduction
- Mission
- Quality assurance
- Healthy food information

Business Benefit: Builds customer trust.

2.3. Contact Module

Purpose: Allows customers to contact the business.

Customers can find our contact details, business hours, and delivery information.

Includes

- Mobile number
- Email address
- Working hours

- Delivery information

Business Benefit: Easy communication with customers.

2.4. User Registration Module

Purpose: Create a new customer account.

New customers can register by entering their email, name, and password.

Fields

- Email
- First name
- Last name
- Password
- Confirm password

Business Benefit: Builds the customer database.

Validation: Required fields, password confirmation, email uniqueness.

2.5. Login Module

Purpose: Authenticate users.

Existing customers can securely log in using their registered credentials.

Features

- Email login
- Password login
- Forgot password
- Google login
- Facebook login
- GitHub login

Security: Authentication and password encryption.

2.6. My Account Module

Purpose: Manage the customer profile.

Customers can view and edit their personal information.

Information Stored

- Name
- Email
- Address
- City
- Mobile number
- Postal code

Business Benefit: Update profile and personal information management.

2.7. Product Module

Purpose: Display food products.

This page shows all available food products.

Features

- Product image
- Product name
- Brand
- Price
- Reviews
- Search
- Category filter
- Pagination

Business Benefit: Easy product browsing for the customer.

2.8. Search Module

Purpose: Quickly locate products.

Customers can search products by typing keywords (e.g. Apple, Banana, Potato) and results appear instantly.

2.9. Filter Module

Purpose: Filter products by brand or category.

Products can be filtered by brand or category for faster, more relevant browsing.

Benefits

- Faster searching
- Better customer experience

2.10. Product Details Module

Purpose: View complete product information.

When a customer clicks 'View', the system shows the product image, description, price, brand, reviews, and availability.

2.11. Shopping Cart Module

Purpose: Store selected products before checkout.

Customers can add multiple products into their shopping cart before checkout.

Planned Features

- Quantity update
- Remove item
- Coupon code
- Total calculation

2.12. Order Module

Purpose: Manage customer orders.

Every purchase creates an order.

Order Status

- Pending
- Confirmed
- Processing
- Delivered

Planned: Cancel order, invoice generation, payment status.

2.13. Delivery Module

Purpose: Track deliveries.

Customers and admin can monitor delivery status.

Status Values

- Pending
- Out for delivery
- Delivered

Business Benefit: End-to-end order tracking.

3. Administrator Modules

3.1. Add Product Module (Admin)

Purpose: Create new products.

Admin can add new food items to the catalog.

Fields

- Product name
- Price
- Category
- Brand
- Product image
- Description

3.2. Product Management Module

Purpose: Manage existing products.

Admin can view, edit, delete, and search products.

Business Benefit: Streamlined inventory management.

3.3. User Management Module

Purpose: Manage platform users.

Admin can view, update, and delete users, and assign roles.

Demo note: no users are available in the current demo dataset.

4. Planned / Future Modules

4.1 Dashboard

The dashboard will provide a single view of platform health, including:

- Total users
- Total orders
- Today's sales
- Monthly revenue
- Pending orders
- Delivery status

4.2 Reports

Planned reporting suite:

- Sales report
- Customer report
- Product report
- Delivery report
- Revenue report

5. Security

The application provides the following security capabilities:

- Authentication
- Authorization
- Password encryption
- Role-based access

6. Technology Stack

Layer	Technology
Backend	Spring Boot
Frontend	Thymeleaf, HTML, CSS, JavaScript, Bootstrap
Database	MySQL
Security	Spring Security
Deployment	Linux Server, Apache / Nginx, Domain Hosting

7. Application Flows

7.1 Customer Demo Flow

7.2 Admin Flow

8. Anticipated Questions & Answers

Q1. What is Fresh Khana?

Fresh Khana is an online food ordering platform where customers can browse products, place orders, and track deliveries, while administrators manage products, users, orders, and deliveries.

Q2. Why was this built?

To provide a simple, scalable online food ordering system that helps businesses digitize their ordering and delivery operations.

Q3. Who can use this system?

Customers, for ordering food, and administrators, for managing the business.

Q4. Is this secure?

Yes — it uses user authentication, password encryption, and role-based access control.

Q5. What improvements are planned?

Online payment integration, live delivery tracking, notifications, inventory management, an analytics dashboard, customer reviews, coupons, and a mobile application.

9. Closing Statement

This is the current working version of Fresh Khana. The core modules — user registration, login, product browsing, profile management, order handling, and delivery management — are implemented. We are continuously improving the UI/UX and adding advanced business features such as online payments, real-time order tracking, inventory management, reports, and analytics to make it a complete production-ready food ordering solution.
