

CRM Feature Documentation

1. Support Module ■

Purpose: Manage customer issues and requests in an organized way.

Key Functions:

- Create and manage support tickets
- Track status (Open, In Progress, Resolved)
- Assign tickets to agents
- Store conversation history
- Multi-channel support (email, chat, WhatsApp)

Outcome: Faster issue resolution and better customer satisfaction.

2. Services Module ■

Purpose: Manage the services your business offers and link them to customers.

Key Functions:

- Create service catalog (plans, packages, offerings)
- Assign services to customers
- Track service usage and history
- Manage renewals or expirations

Outcome: Clear visibility of what each customer is using.

3. AI – Native & Hyper Automation ■

Purpose: Automate repetitive tasks and improve decision-making using AI.

Key Functions:

- AI chatbot for customer interaction
- Auto-response to common queries
- Workflow automation (assign leads, send emails)
- Smart recommendations

Details: Possible Integration: OpenAI APIs for intelligent responses.

Outcome: Reduced manual work and faster operations.

4. Sales Force Automation (SFA) ■

Purpose: Streamline the sales process and improve team productivity.

Key Functions:

- Lead capture and management

- Deal/pipeline tracking
- Task reminders for sales team
- Automated follow-ups
- Sales reports and analytics

Outcome: Higher conversion rates and better sales tracking.

5. Instant Agentic Self-Service ■

Purpose: Allow customers to solve issues on their own without human help.

Key Functions:

- Self-service portal
- AI chatbot for instant answers
- Knowledge base (FAQs, guides)
- Automated actions (reset password, track order)

Outcome: Reduced support load and faster customer resolution.

6. Human Safety Net ■

Purpose: Ensure human intervention when automation is not enough.

Key Functions:

- Escalate chatbot conversations to human agents
- Manual override for automated actions
- Priority handling for critical issues
- Supervisor monitoring

Outcome: Prevents errors and improves trust.

7. Proactive Service ■

Purpose: Solve problems before customers even report them.

Key Functions:

- Alerts for potential issues
- Automated reminders (renewals, payments)
- Behavior-based triggers (inactive users, failed actions)
- System health monitoring

Outcome: Improved customer experience and retention.

8. Hyper Personalization ■

Purpose: Deliver highly customized experiences to each customer.

Key Functions:

- Personalized messages and offers
- Recommendations based on behavior
- Dynamic content (emails, dashboards)
- Customer segmentation

Outcome: Higher engagement and loyalty.

9. AI Predictions in CRM ■

Purpose: Use AI to predict outcomes and support decision-making.

Key Functions:

- Lead scoring (who is likely to convert)
- Churn prediction (who may leave)
- Sales forecasting
- Customer lifetime value prediction

Details: How it Works: Collect historical data, apply machine learning models, and display predictions in CRM dashboard.

Outcome: Better planning and smarter business decisions.
